

WASTE INFORMATION MANAGEMENT SYSTEM

WIMS is a web-based enterprise system to manage waste-related information. It supports waste generators, logistic companies and waste treatment companies in meeting their legal compliance requirements. It also helps authorities to implement, monitor and control their legal regulations.

WIMS is a one-stop shop of various tools and applications that address most of the waste management tasks and activities via a simple user-friendly interface that can be operated by a lean team.

Tools and apps for the automation and digital transformation of all waste management activities

Proudly Trusted By

Comprehensive

WIMS is an integrated enterprise solution that supports collection, storage, analysis, and presentation of hazardous and non-hazardous waste related data on a national level.

Modular

WIMS offers a set of applications that handle various types of waste management activities. It could be configured in any combination that suits your business.

Flexible

WIMS is hosted online and offers a subscription-based licensing scheme that could be scaled according to the number of users. It could also be hosted on premises upon request.

Secure

WIMS is a web-based solution that allows the users to access all applications from anywhere, whether from work office or from home-office, with a secured single sign-on authentication.

User Friendly

WIMS offers a user-friendly and multilingual interface with Arabic support and customized responsive experience that works simultaneously from mobile and desktop devices.

Ready

WIMS is ready for delivery and deployment upon request and is configurable and customizable to fulfill the specific requirements of most clients.

Integrable

WIMS includes a set of built-in tools and APIs for data exchange with external entities from the private and public sectors.

Analyzer

WIMS offers real-time monitoring and analysis tools that allow cities and businesses to uncover and understand the complex dynamics of waste management data.

Observer

WIMS waste movement tracking tools allow regulatory bodies to monitor the waste movement from cradle to grave.

Executive

WIMS includes a set of integrated dashboards and analysis tools that control, steer and monitor waste management strategies and masterplans. It provides decision makers with information about key parameters and indicators.

Revenue Generator

WIMS can be used to generate income to the waste management regulators. It is integrable with most common payment gateways for fee collections and payment tracking. It automatically sends notifications on late payments on predefined time intervals.

Standard

WIMS contains a full implementation of the European Waste Code (EWC). It also offers tools and functions in support of international obligations such as the Basel Convention.
